

MDS Quality Data Viewer

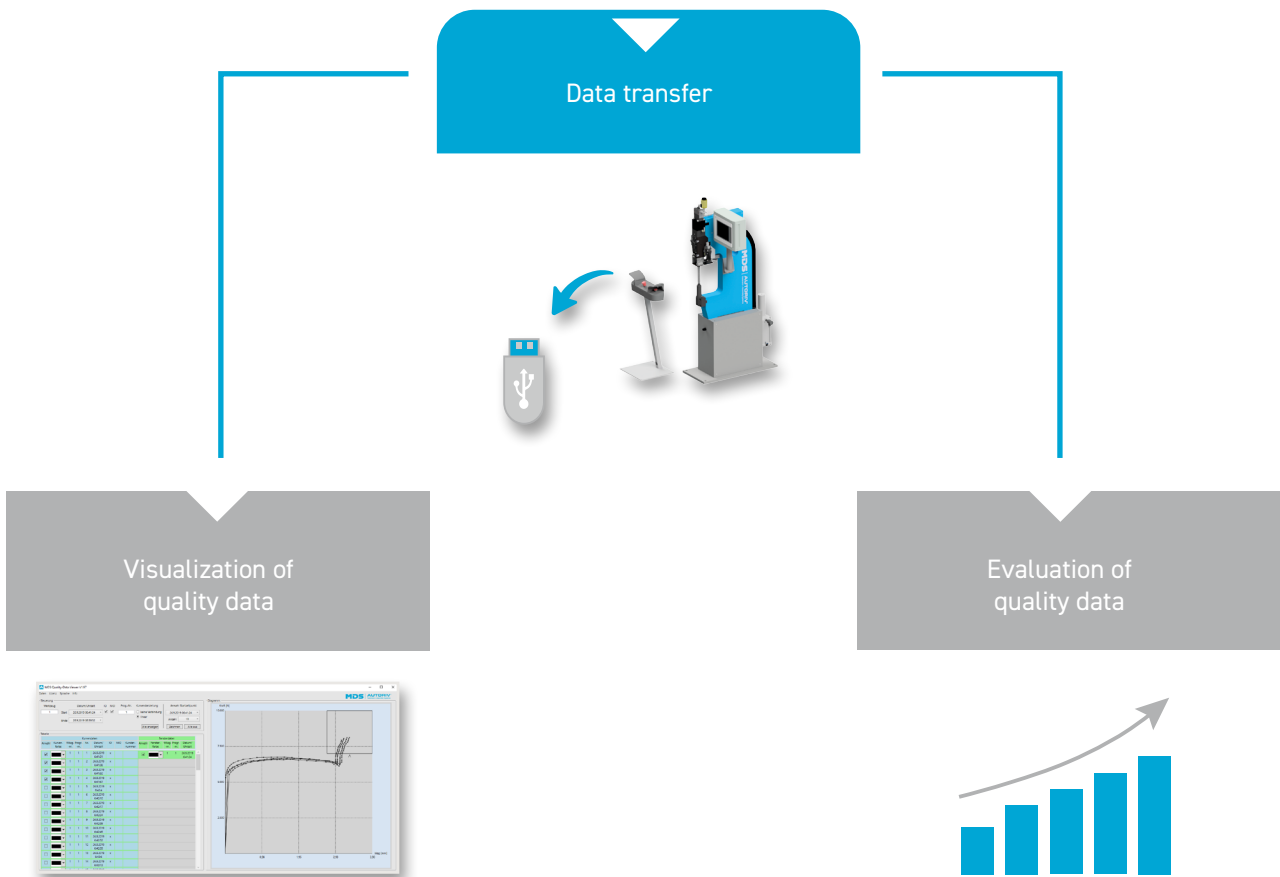

- ▶ Visualization of force-displacement information for quality control
- ▶ Support in the analysis of data and errors through filter options

- ▶ Data transfer via USB stick or direct connection to the network
- ▶ Display and analysis of force-displacement curves
- ▶ Evaluation of force-displacement information through numerous filter options
- ▶ Display of curve monitoring windows for troubleshooting and for the optimization of parameters

- ▶ Production data can either be saved or downloaded from the machine via a USB stick, be transferred continuously via a network cable or be protocolled digitally with a built-in hard-disc. Then the data is visualized in the **MDS Quality Data Viewer**.
- ▶ The analysis of force-displacement curves forms the basis of the quality control. With the **MDS Quality Data Viewer**, all force-displacement information can be visualized and evaluated.
